

Reza Soltani

Software Engineer | Backend Specialist | Node.js & Distributed Systems

[LinkedIn](#) | [GitHub](#) | soltanireza65@gmail.com

Summary

Highly skilled **Senior Software Engineer**, specializing in **backend** development and system architecture. Expertise in designing and implementing **scalable, maintainable**, and **high-performance** solutions using modern software engineering practices such as **Domain-Driven Design (DDD)**, **Hexagonal Architecture**, and **Microservices**. Proven track record in **optimizing system performance**, building seamless backend services, and implementing **CI/CD** pipelines. Experienced with technologies like Node.js, NestJS, PostgreSQL, RabbitMQ, Redis, React.js, Next.js, and more. Strong leadership capabilities, with experience mentoring junior developers, fostering cross-functional collaboration, and driving continuous learning across teams. Adept at solving complex technical challenges, ensuring system scalability, and enhancing software reliability.

Technical Skills

Backend: Node.js, NestJS, Express.js, REST APIs, WebSockets

Frontend: React.js, Next.js, Tanstack, Tailwind CSS

Databases: PostgreSQL, MongoDB, Redis

Architecture: Microservices, Distributed Systems, DDD, CQRS, Event-Driven

Messaging & Streaming: RabbitMQ, Kafka

DevOps & Cloud: Docker, Kubernetes, Nginx, Caddy, GitLab CI/CD, Github Actions

Performance Optimization: Caching, Load Balancing, Reverse Proxy, Profiling

Testing & Security: Unit Testing, E2E Testing, API Security, OAuth, Keycloak

Programming: JavaScript, TypeScript, Golang, Bash, Linux, Git

Experience

Daal - Backend Developer | Feb 2024 - Present | Remote

- Refactored a **high-traffic** backend codebase to **Hexagonal Architecture**, improving maintainability and scalability by **50%**.
- Designed a multi-tenant SaaS backend using Domain-Driven Design for modular business logic.
- Designed optimized **PostgreSQL schemas**, reducing query times by 50%.
- Implemented **CQRS & event-driven** patterns to handle **high-concurrency** workloads efficiently.
- Optimized API performance using **Redis caching** and **load balancing** techniques.
- Automated **CI/CD pipelines with GitLab**, reducing deployment efforts by **90%**.
- Eliminated distributed locks across services to reduce race conditions and improve consistency.

Technologies: Node.js, NestJS, PostgreSQL, Prisma ORM, RabbitMQ, Kafka, Docker, GitLab CI/CD, Redis

Stichting Ponder Source – Software Engineer | Jan 2023 – Feb 2024 | Remote

- Contributed to the **Solid Data Modules** project – modular JS/TS libraries for reading and writing Solid Pod data, enabling interoperability between RDF data formats.
- Integrated **LDAP**, **OIDC**, and **Keycloak** for scalable authentication across multiple ownCloud instances.
- Developed **SCIM REST API** endpoints with **100% unit test coverage**, improving maintainability.
- Introduced a **monorepo setup with Turborepo**, reducing build times by **40%**.
- Automated API documentation processes for improved developer experience.
- Automated **TLS and reverse proxy** setups, cutting deployment time by 80%.

Technologies: Node.js, TypeScript, Nginx, Docker, Keycloak

Xaniis – Software Engineer | Feb 2021 – Feb 2023 | Remote

- Introduced and applied **Hexagonal Architecture** principles to establish clean boundaries between domains, resulting in more maintainable and testable services.
- Containerized applications and standardized deployment processes using **Docker** and **Kubernetes**, reducing release friction and improving operational consistency.
- Provided mentorship through code reviews and architectural guidance, helping elevate code quality and technical decision-making within the team.
- Built core features for both the **OMS trading platform** and internal **Admin Dashboard**, focusing on performance, usability, and long-term maintainability.
- Developed modular and reusable frontend components using **React**, **Next.js**, **TypeScript**, and enforced consistent state management patterns using **TanStack Query** and **Recoil**.

Technologies: Node.js, Kubernetes, Docker, Nginx, PostgreSQL, RabbitMQ, Redis

Tarnamagostar – Backend Developer | Jun 2020 – Jan 2021 | Remote

- Architected **scalable** microservices with **NestJS**, supporting high-concurrency operations.
- Optimized inter-service communication using **RabbitMQ**, reducing latency by **30%**.
- Deployed **CI/CD pipelines** on GitLab, automating builds, tests, and deployments.
- Integrated **Redis caching** for real-time data processing, improving responsiveness by **50%**.
- Enhanced observability with **logging & monitoring** solutions (Winston, ELK Stack).

Technologies: Node.js, NestJS, RabbitMQ, Docker, CI/CD, TypeScript, ELK Stack

CITEK – Backend Developer | Jan 2019 – May 2020 | Remote

- Built and deployed scalable **RESTful APIs** with Node.js & Express.js for 5+ applications.
- Improved backend performance by 40% through database indexing in MongoDB.
- Designed a **role-based access control (RBAC)** system for secure user management.

- Containerized applications using **Docker**, ensuring consistency across environments.
- Delivered backend features in **Agile sprints**, ensuring on-time releases.

Technologies: Node.js, Express.js, PostgreSQL, Docker, Nginx, Redis, OAuth

Freelance - Software Developer | Jan 2017 - Dec 2018 | Remote

- Developed and maintained backend features for multiple **e-commerce platforms**, including custom APIs, payment integrations, and order processing workflows.
- Built **custom WordPress plugins** and optimized existing ones to improve performance, security, and maintainability.
- Designed reusable backend modules in Node.js and PHP, establishing early patterns in modular and layered architecture.
- Collaborated with clients to deliver full-stack solutions, including dashboards, admin panels, and automation tools.
- Gained practical experience in system design, API development, Git workflows, and production deployments – forming the foundation for later work in distributed systems and microservices.

Technologies: Node.js, PHP, WordPress, MySQL, JavaScript, Git, Linux

OSS

Nestified

A collection of high-quality **NestJS** utilities, modules, and tooling – crafted to make building backend applications faster, cleaner, and more maintainable.

Solid Data Modules

Developed modular JavaScript code for reading and writing specific data types in Solid Pods, ensuring interoperability with diverse data formats.

Education

University of Tabriz – *Master's Degree in Intelligent Simulator Design*
